

PC NAV: the perfect software to satisfy any navigation needs. With Navionics Platinum cartography

With the A.I.S. function

Shipping while using your own portable Pc on board is becoming more and more important in modern navigation.

From now on it is available Geonav PC NAV, the perfect software to satisfy any navigation needs. Just connect PC NAV to your external GPS antenna, and you will have on you Pc a powerful navigation tool, matching the same performances of the most advanced GPS plotters. Geonav adds this new software to its catalogue, alongside the already available Geonav Power, Wind and Fish programs.

PC NAV is easy to install on your computer, and really intuitive to use thanks to a new system of clear icons. Suitable for any ship, PC NAV software employs from now also Navionics Platinum Cartography, and is compatible with Vista®.

Data backup is simple too: using the Reader of Compact Flash™ or SD™, information can be easily transferred from your Pc to other Geonav plotters and vice versa. For this reason, PC NAV can be indifferently used as a complete navigation software, or joined to Geonav plotters. Given that PC NAV is equipped with an internal simulator, you may also use it stand alone, in order to simulate at home your own routes and navigations.

In PC NAV, like all the Geonav navigation programs, the AIS function is available. When connected to a specific receiver, this device will allow you to identify every boat or ship transmitting this specific signal, and to see its position directly on the cartography: a further security factor that Geonav has the pleasure to offer for your own safer navigation.
