

**New GOLD XL9  
Electronic Charts  
-  
European  
Coverage**

**Triple the coverage, same great detail, same great price!  
Available from March '07 for Europe**

Following up from the success of XL3, Navionics introduces the new XL9-size charts for Europe and the Rest of the World. Available for Navionics Gold charts, XL9 offers up to triple the coverage of an already sizable XL3 chart at the recently lowered, very attractive price of €199 (excl. VAT)!

The vectorized XL9 charts are developed using the Navionics exclusive full Seamless Technology which provides clearly legible charts without clutter, holes or discontinuities at every zoom level. With the same great details of the current XL3 charts at up to 16 zoom levels, XL9 charts offer a wealth of information on nav aids, tide and currents, port services - details greatly appreciated by sports fishermen and navigators alike.

XL9 cartography is available on preprogrammed generic CF (Compact Flash) cartridges that are readily available with expandable memory for future developments.

The plug-and-play feature of the charts eliminates the need for consumers to download CDs or unlock codes. XL9 charts are easy-to-use and provide better value added, by covering a greater area for a reduced cost. For example the whole of the Mediterranean and Black Sea is now on one single chart at €199 (excl. VAT).

**Since XL9 charts for Europe will be available next March, Navionics is now offering a free upgrade to the corresponding XL9 chart to all customers buying a XL3 chart between January and April 2007. Customers should contact Navionics for further information and conditions applicable to this promotion.**
