

*The first
satellite
marine
navigator with
a passion for
skiing is on its
way*

Geonav is launching a new multi-function GPS able to navigate at sea, over land and even to the peaks of the all alpine mountains.

Together with the wide range of items that distinguishes our company, Geonav is putting a revolutionary chart plotter on the market capable of combining all the features useful to dynamic and sport-loving people in one unit. Geonav 3 will accompany them throughout the year in any situation or on any journey like a perfect adventure partner without ever having to change or replace charts or plotters.

Unique in its kind, Geonav 3 is a land, marine, outdoor and skiing navigator at the same time. Navionics exclusive outdoor cartography lets you navigate in the ski-resorts on all the Alps, so that you can reach the access points of ski lifts, look at P.O.I. – point of interests -, ski slopes (refuges, restaurants, ticket offices with georeferenced pictures), pistes (name and level of difficulty) and ski lifts (name and type); then it even allows you to look back and weigh up the journey just made.

The database contains information about paths, refuges, mountains and other important information relevant to hiking lovers. Of course you can still use your Geonav 3 for road and also for marine navigation (Navionics Platinum charts provide port pictures, coastal aerial images and three dimensional views).

Its minute compact dimensions, weighing no more than a 100 grams, its water resistance (IPX 7), its large and bright screen visible under any form of light and its highly functional and appealing design guarantee easy map reading under all meteorological conditions.
