GEONAV 4C XS

Unique, because **GEONAV 4C XS** (Extra Screen) is the only handheld which can be connected to one or more external displays thanks to its SVGA output and to **GEONAV 15" SUNSHINE**, the new GEONAV 15" display with sunlight visible LCD screen.

It is surprising the results which can be obtained by putting together the new NAVIONICS PLATINUM cartography with wider displays: the three dimensional representation, the panoramic photographs and aerial imagery are all enhanced on a marine product in a way that no one has ever seen before also due to the fact that the visualized area on the monitor is six times bigger than the one which is shown on the handheld.

GEONAV 4C XS makes a versatile and surprising product, making navigation easier and safer by using the instrument as handheld unit as well as repeating the image on a display from a second position.

GEONAV 4C XS also maintains all the technical qualities and functions found on GEONAV 4C.

These are in fact the only handhelds that are splash proof and capable of reading Navionics Land&Sea charts, having the entire land and sea coverage of Europe at maximum detail.

Equipped with USB and NMEA output, the unit can be connected to an autopilot, echo sounder as well as an external GPS antenna. The battery recharging is automatic each time the unit is connected to the 12 Volt power supply.

Many accessories, such as the speaker cable (to listen to voice instructions during land navigation), the suction cup bracket, the bicycle handlebar mount and the 220V adapter, make **GEONAV 4C XS** a versatile instrument, suitable for many different occasions.

GEONAV srl will be present at the METS - Amsterdam -Nov. 15th-17th
STAND 1.837
