GEONAV AP 201-80. Reduced dimensions, increased functions

GEONAV's ever growing range of products increases with the brand new GEONAV AP201-80 autopilot

Suggested for hulls of up to 13 mt for sailing or motorboats, GEONAV AP201-80 follows any pre-set route to perfection, even on hard to handle vessels, thanks to its sophisticated control algorithm.

The processor box automatically ensures all the settings and provides the correct amount of rudder angle in order to maintain a pre-set route under any sea conditions.

Interfaced with a GPS receiver or a chart plotter GEONAV AP201-80 follows the route and automatically corrects variations in wind and drifting.
